

Quarter - 1 (Apr to June), 2025-26

SHE scores of the organization and the individual projects

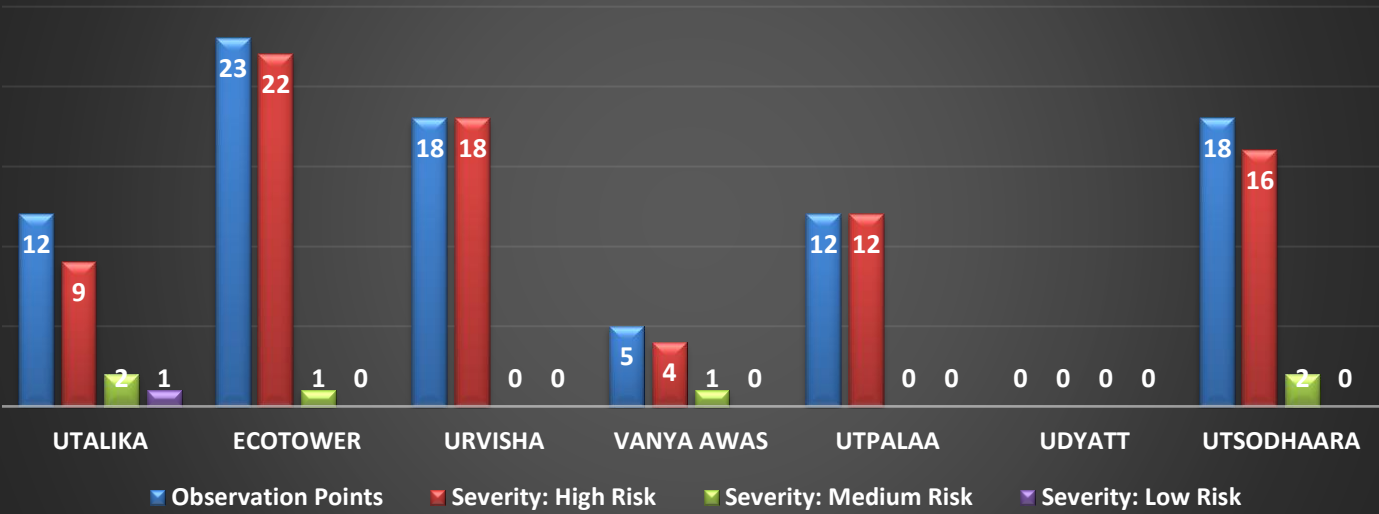

Individual Project SHE Score, Q1, 2025-26

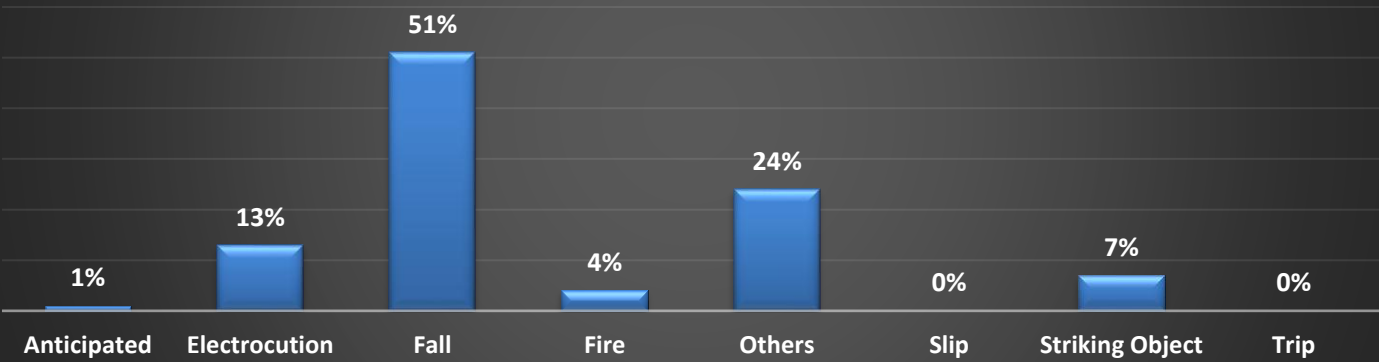

The average Delay Days per Observation in Q1, 2025-26 is 7.45  
(Max 3 days allowed for compliance with each point)

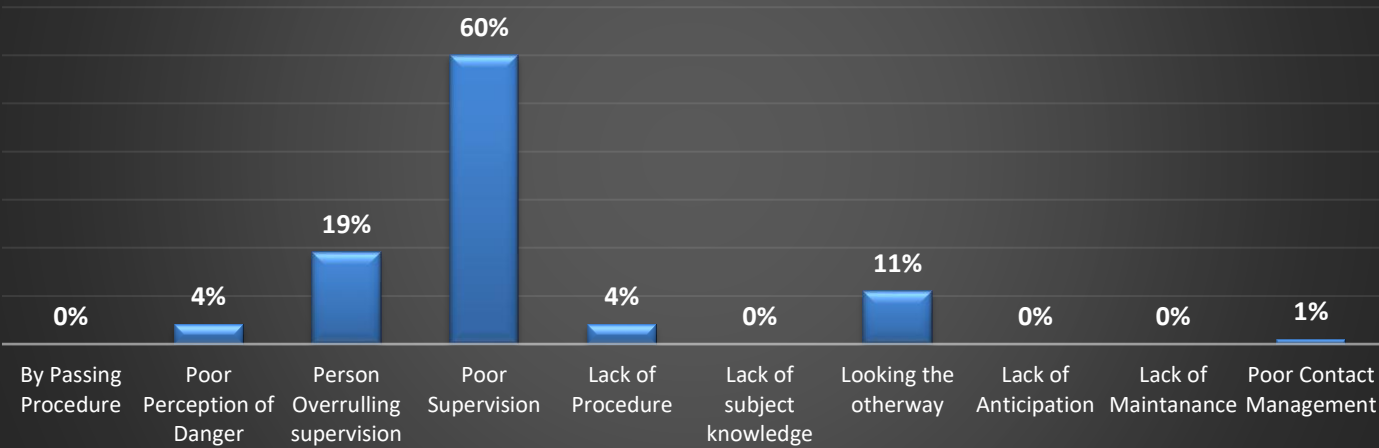

Risk Analysis of each Project, Q1, 2025-26

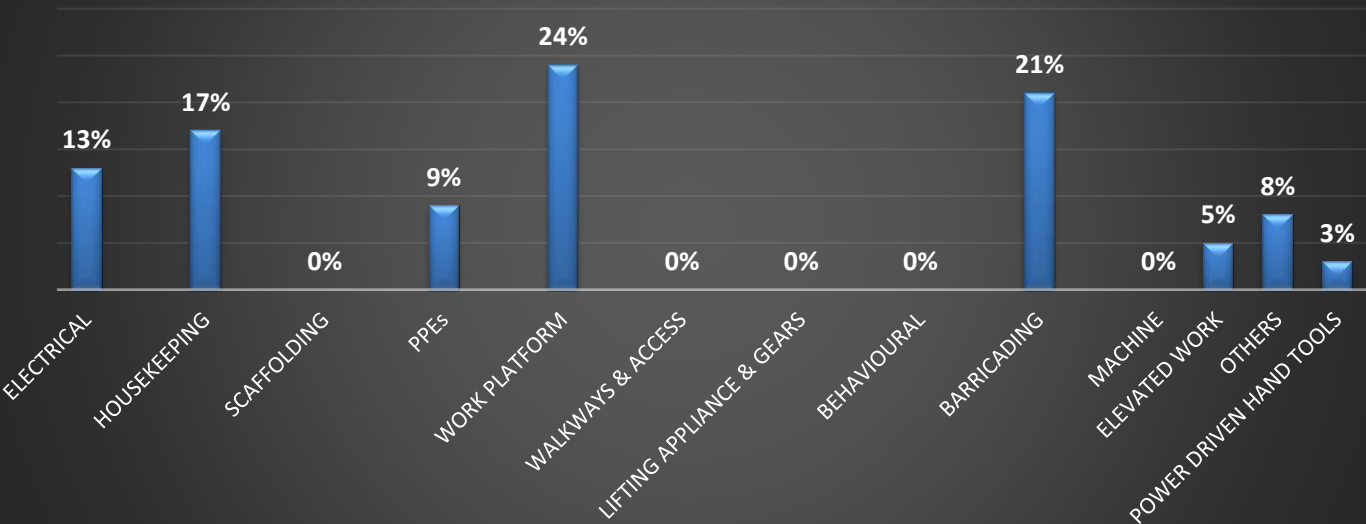

Potential consequences due to violations, Ambuja Neotia, Q1, 2025-26

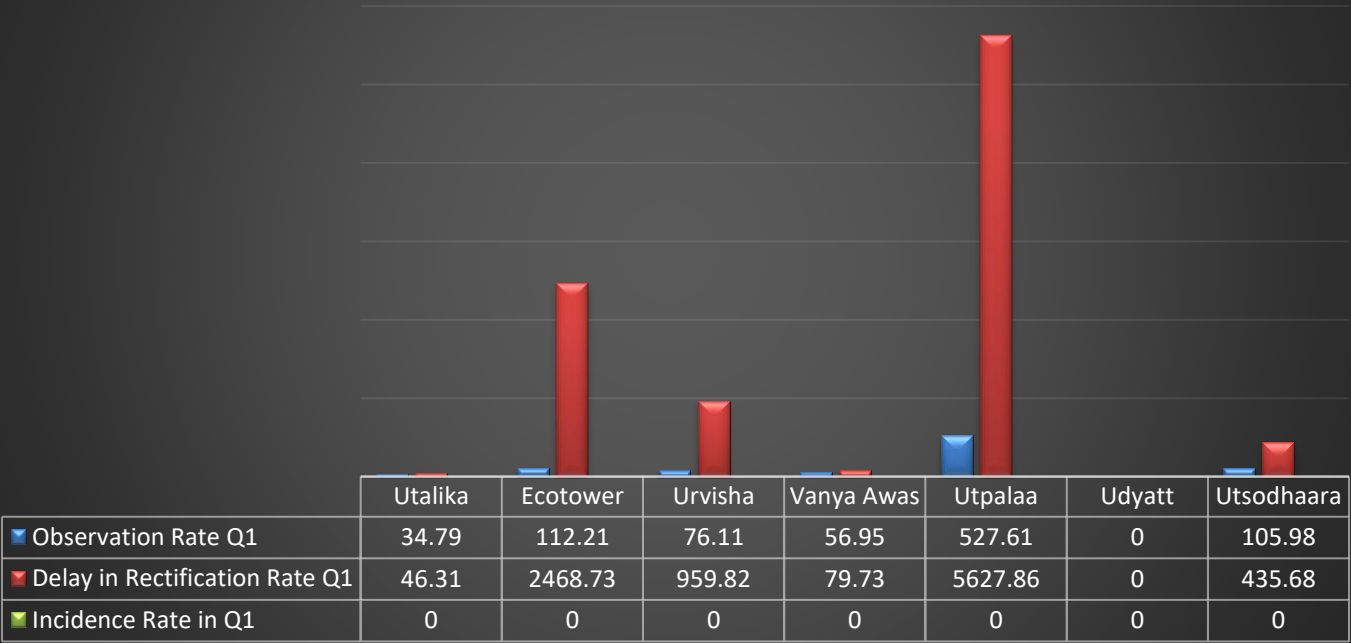

Root cause of violations in Ambuja Neotia Projects, Q1, 2025-26

Predominating areas of Safety violations,Q1, 2025-26

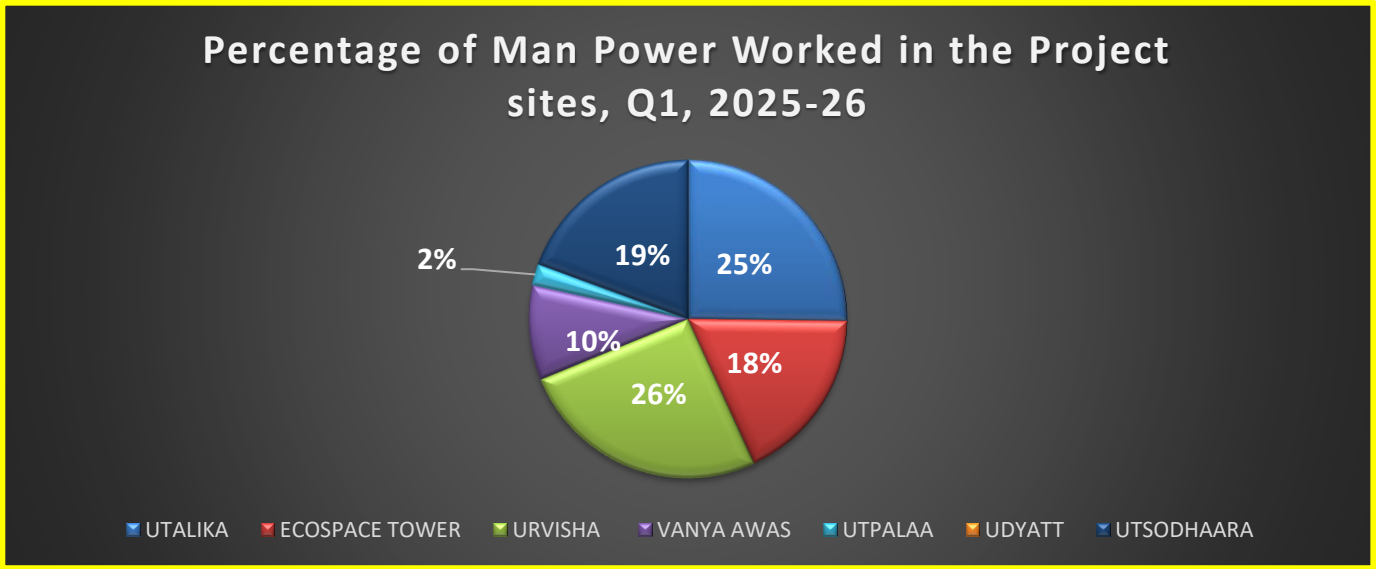

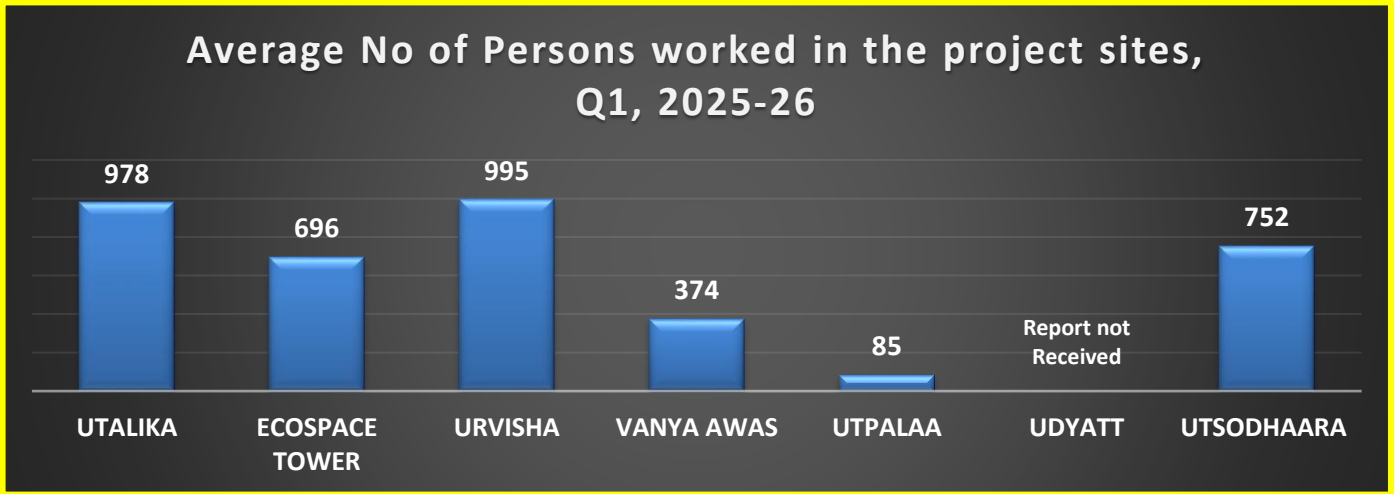

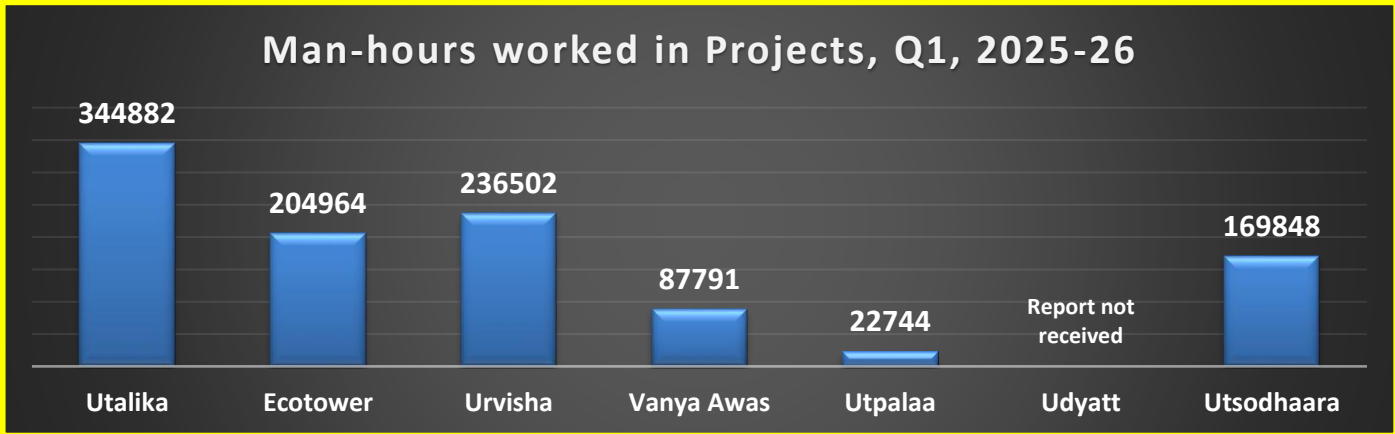

Observation Rate, Delay in Rectification Rate, Incidence Rate, Q1, 2025-26

In our SHE observation system, we correlate “Delay in Rectification” to the number of days spent to rectify and close the unsafe observations. So, a higher “Delay in rectification” rate means that a particular project is staying with risks for a greater number of days.

We must **increase** the Observation rate by **increasing** the number of SHE observations and **decreasing** the severity rate through **timely rectification** of the observations.
